Product Boxes

HTML

- Create 3 product boxes
- Each box will contain an image, a title and a button
- Create a popup with an overlay

CSS

The popup should be hidden by default.

- If the popup is open:
  - The overlay should be gray
  - The popup should appear in middle of the page
  - The popup size should be width: 50%; height: 50%

JS
ES6 is recommended, without frameworks/libraries (except jQuery)

- Clicking on a box's button will open the popup
- When the popup is opened, fetch a description related to the clicked box from the server and show it as the popup content
- Add a way to close the popup.

PHP

- Create an abstract class to handle AJAX requests
- Use the abstract class to handle the HTTP requests

Good Luck!
